

# Health Care Hub

This is a simple, responsive, and modern hospital management system website. It's designed to provide information about the hospital's services, doctors, and blog posts, as well as offer a way for users to contact the hospital.

---

## Installation and Setup

To run this project locally, only need to set up the HTML and CSS files, as backend is required.

### Dependencies and Requirements

- A web browser (like Chrome, Firefox, or Safari).
- A code editor (like VS Code,).

### How to Run the Application Locally

1. **Clone or download the project files:** If the project is in a Git repository, clone it. Otherwise, download the project folder containing the index.html file and the CSS files.
2. **Ensure all files are in the same directory:** Make sure the index.html file and the CSS files (e.g., index.css or hospital.css) are in the same folder.
3. **Open the index.html file:** Navigate to the project folder and double-click the index.html file. It will automatically open in your default web browser, and you will see the website.

---

## Project Structure

The project primarily consists of two CSS files that appear to style the same kind of website with slight variations. The HTML file, nodejs would link to one of these CSS files.

- index.css: Styles for the website.
- hospital.css: An alternative set of styles for the website.
- laboratory.webp: An image file likely used for the logo or a section of the website.

The CSS code shows that the website has several sections:

- **Navigation (nav):** A fixed navigation bar with a logo and a menu. It adapts for smaller screens, hiding the menu and showing a "bar" icon.

- **Main Section (main):** The primary hero section with a large heading, some text, a button, and an image.
- **Services (service or serviceCard):** A section displaying various services in cards that change style on hover.
- **Doctors (doctor or doctors):** A dynamic section, likely a carousel or slider, to display information about the hospital's medical team.
- **Blogs (blogs):** A section with cards for blog posts, each having an image, text, and a link.
- **Contact Form (form):** A basic form for users to enter their details.
- **Footer (footer):** A multi-column footer with contact information and other details.
- **Detail Card (detailCard):** A pop-up or modal-like card for displaying additional information, which can be closed.

Both index.css and hospital.css contain similar class names and media queries, suggesting they are different stylistic versions of the same website layout.
